JOB VACANCY

SENIOR TECHNICAL MANAGER

A great opportunity exists for a Senior Technical Manager position to head a division of four in an established and growing business whose main activity has been built around the design, supply and installation of retaining walls, free standing walls and architectural cladding using gabion baskets on a national basis. Working alongside a further team of personnel directly employed within the Commercial and Operational divisions, the successful candidate will be fully qualified and trained in Geotechnical/ Civil Engineering with a minimum 10 years' experience in the industry.

The Directors have ambition to continue the current level of growth through the introduction of other geotechnical systems. The successful applicant would therefore be pivotal in developing, introducing and driving these plans forward.

The preferred candidate's attributes are:

- A first degree in Civil Engineering (or similar with a significant engineering/ geotechnics component).
- A strong background and knowledge in geotechnical engineering analysis and design using current codes/ standards.
- Have a good knowledge of geotechnical design principles and practice in retaining wall principles, slope stability, earthworks and reinforced earth.
- Conversant and experienced in the use of industry available Geotechnical Software Suites such as GE05.
- Proficient in the use of Windows and Microsoft Office.
- Experienced in the use of CAD for the preparation of drawings and plans.
- A full UK driving licence, preferably clean.
- Ideally midlands based who would work out of the companies Longton, Stoke-on-Trent Headquarters, but who will also be prepared and able to travel nationally as well as to stay away overnight as and when the role requires.
- A hard working confident team player, with strong leadership and communication skills who can motivate, lead by example and drive their fellow colleagues.
- Of smart appearance and well organised who is able to represent the company professionally at client meetings.
- A promoter of a Health and Safety Culture.

design supply installation

-
- Attendance at technical standards meetings and involvement in QA where and when required.
 - Be commercially aware in what is a competitive industry through the offering of value engineered solutions where required.
 - Assist in the writing of specifications and general technical documents to support the business commercially when launching new solutions.
 - Conduct site assessments where required to assess both the appropriateness of a geotechnical solution and the risk/ reward ratio of offering a supporting installation service.
 - Supervise and administer contracts.
 - To actively seek engagement from new clients and or obtain repeat business from existing clients and to provide excellence in client management.
 - To assist the Directors with identifying the areas of business growth as well the increase in resourcing to accompany such growth.

Remuneration and Benefits

- A negotiable salary based upon candidates existing experience.
- 4 door company car.
- Life Insurance.
- Auto enrolment option into the Company Pension Scheme in line with Government guidelines.

Interested candidates are invited to forward their application and current CV to:
